

A constituency operations system for Kerala MLAs

An office that knows its constituency, answers everyone, and forgets nothing.

Bilingual · Malayalam and English

No app to download

Works with the funds you already control

Party neutral by design

The request

After our meetings in Kerala, one office asked whether we could build a platform that helps the member serve constituents easily, fairly and efficiently, and make them happy.

1 Easily

Nothing to download. A voice note in Malayalam is enough.

2 Fairly

Every request logged, timed and visible. No one is louder than the queue.

3 Efficiently

The office knows where each matter belongs and which fund pays for it.

4 Happy

People are remembered, answered, and told when their matter is done.

What a front office actually runs on

A WhatsApp group and a register

Requests arrive by voice note, phone call, folded paper and word of mouth. They are held in a staffer's memory until they are not.

Money that lapses quietly

Allocations expire unspent because nobody sees the position until March.

Silence as the default reply

Most people who write to a member never hear anything again. That silence is what they remember.

Two jobs that never meet

Constituency casework sits in one diary. Assembly work sits in another. Neither informs the other.

No memory across time

What was promised at a house visit in March is gone by August. Staff change and the constituency's history leaves with them.

Only the loud are heard

The office hears from people who know how to reach it. Whole wards go quiet and nobody notices.

Model the constituency, not the complaint

Every grievance system built so far is petition-shaped. A citizen submits, a ticket opens, a department is tagged. The office becomes a well-run post office and understands the constituency no better than before.

Forty complaints about water from one ward stop being forty tickets. They become one fact about a distribution line, owned by a named authority, possibly already attached to a sanctioned work.

Three kinds of work, kept separate

A Obligations

The state owes something. A road, a transformer, a school compound wall, a water connection.

- ✓ Civic issues, ward by ward
- ✓ The fund router
- ✓ Works and payments
- ✓ Lapse alarms

B Presence

Someone wants the member's time, attendance, signature or name. This spends the member's own capital, not the state's.

- ✓ Referral letters, with diligence
- ✓ Invitations and greetings
- ✓ Appointments and inaugurations
- ✓ Condolences on their own path

C Outbound

The office tells people what is available to them and what has been done.

- ✓ Scheme alerts to those eligible
- ✓ Works updates to the ward affected
- ✓ Monsoon and disaster warnings
- ✓ The monthly constituency report

WHY THIS IS NEW

Rail A exists badly in several places. Rail B has never been built anywhere. It is where an office wins or loses its reputation.

Civic issues, joined to the money

Roads, transformers, street lights, water connections, drainage, school and anganwadi repairs. Joining these to the funds is where the real feature sits.

THE FUND ROUTER, ONE REQUEST

A transformer, by contrast, goes to KSEB and needs no fund at all.

Closing the loop

The person who reported the wall is told, months later, that their request became a sanctioned work with a number. Nobody in India does this. It is the difference between a complaint and a relationship.

Lapse alarms

Allocations that will expire unspent, raised loudly in December and January rather than discovered in March. Money lapsing is a standard and entirely avoidable embarrassment.

Presence, handled with care

Referral letters

A member's letter is a reputational instrument. If it reaches a body that turns out to be fraudulent, the member's name is on it permanently.

- ✓ Three grades, weakest by default
- ✓ A diligence file before any letter
- ✓ Retrievable in year five
- ✓ Repeat and overlap detection

Invitations

A member can attend six functions a day and will be invited to many times that. The promise is a reply inside a fixed window, never an appearance.

- ✓ Attend, send a representative, or send a message
- ✓ Malayalam written by a person
- ✓ Death and illness on a faster path
- ✓ Print-ready cards from the office

Appointments

Capacity is controlled by the office. Slots are never published for people to book into.

- ✓ Queue position shown, not just pending
- ✓ Requests batched by panchayat into each trip
- ✓ Protocol list for the board
- ✓ Claims against available hours

48_h

THE PROMISE

The failure mode here is over-promising. What we guarantee is a warm, specific answer within forty-eight hours. Silence is the injury we are removing, and that is a promise the office can keep.

See it working

What follows are running interfaces, not pictures. Everything is shown in English so every word can be checked. The platform itself runs in Malayalam and English.

The constituent's phone

The member's phone

The office desk

All names and data are invented

A voice note is the whole interface

ONE MINUTE, SIX STEPS

- 1 Transcribed from the voice note
- 2 Classified into a fixed taxonomy
- 3 Resolved to a ward
- 4 Matched against the asset register
- 5 Checked for duplicates, then routed
- 6 Given a tracking number, sent back

No app, no login, no form. The system told the constituent something true that no office could have told them: their complaint is part of a pattern.

39

complaints about this same matter have come from your ward

That one sentence changes the experience from shouting into a void to joining a case that is already being worked.

THREE WEEKS LATER, THE SAME THREAD

A screenshot of a chat interface. At the top right, a dark blue bubble contains the text "Thank you very much." with a timestamp of "11:06". Below this, a date separator "14 JULY" is centered. Further down, a light blue bubble with a dark blue "Completed" label at the top left contains the text "The transformer has been replaced and your request is closed. Would you tell us how it went?" with a timestamp of "17:20".

BILINGUAL, END TO END

A constituent writes or speaks in either language and is answered in the same. The Malayalam wording is written and approved by a person once and then reused, rather than translated afresh each time.

The invitation reply is the hard one

A regret that arrives within two days, names the daughter and the date, and comes with a card, is remembered warmly. A regret that arrives late, or never, is remembered differently.

48h

A specific, warm answer to every invitation, inside a fixed window.

3

Ways to answer: attend, send a representative, or send a message.

Never

A promise of attendance. Capacity stays with the office.

1

Faster path, reserved for death and illness.

Ten seconds in a car between programmes

The visit brief is what people remember

Being recognised by name, with your own history known, is what a constituent describes to others for years.

Grounded, or silent

Every number traces back to a source record. The system says it cannot answer rather than guessing. The language model writes language and never arithmetic.

Lalitha's line is the point

A promise made in March, never filed, never chased, and never mentioned again by the person who needed it. Nothing in an office today catches that.

Nothing goes quiet unnoticed

Every item carries a next date and a named owner and cannot exist without both. Offices lose things through volume rather than malice.

Where the staff spend their day

Nothing here can exist without a next date and a named owner. Items that go quiet escalate on their own.

Nothing here can exist without a next date and a named owner. Items that go quiet escalate on their own.

Today's queue

28 open · 6 past their date · 2 escalating tonight

This week62h claimed / 12h available

MATTER	WARD	TYPE	AGE	OWNER
Transformer failure, canal road Reported by voice note	12 · Kadungalloor	Civic	3 d	Rajesh
School compound wall, GHSS Requested by the school PTA	6 · Alangad	Civic	11 d	Priya
Drinking water, colony road Escalating to the House tonight	4 · Karumalloor	Civic	61 d	Escalating
Housing application help Found by the system, never reported	12 · Kadungalloor	Entitlement	2 d	Field staff
Street lights out, 3 poles Fourth report since 2024	9 · Eloor	Civic	22 d	Rajesh

Transformer failure, canal road

Ward 12, Kadungalloor

WHAT THE MODEL KNOWS

39 open matters resolve to the same distribution transformer. This is one asset failure, not 39 complaints.

FACTS

Authority	KSEB, Aluva section
Fund needed	None
Next date	9 Aug
Owner	Rajesh K.

Draft KSEB letter

ONE QUEUE

Civic issues, invitations and referrals sit in one place, each with its own rules.

EVERY ROW HAS AN OWNER

A named staffer and a next date, or the item cannot be saved at all.

ESCALATION IS AUTOMATIC

Silence is treated as a fault in the system rather than a fact of life.

The wards that go quiet

The dark cells are not the noisiest wards. They are the ones with a shared cause underneath.

94
DAYS SILENT

Kunnukara ward 4 has raised no matter in 94 days, against a constituency median of 11. That is almost never contentment. The system raises it as a silence flag and suggests a house to house round on the next trip.

Money, seen before it lapses

Solid is spent, hatched is committed, open is still free. Every head, on one screen.

₹41.2L

UNCOMMITTED

Raised loudly in December and January rather than discovered in March, when nothing can be done about it.

What the office produces without retyping anything

Letters and references

To panchayat secretaries, departments and collectorates, in the office's own format, generated from the matter and its history.

Assembly questions

When casework has failed at the department, a drafted starred question with the numbers attached and every source request traceable.

Cards and greetings

Blessing, congratulation, condolence and regret, digital and print ready, from an approved library with a review click before anything sends.

Every document in both languages

Each of these generates in Malayalam and in English from the same record. The office sends whichever the recipient needs, and the file keeps both.

The monthly report

One page, branded to the member, publishable. What came in, what was resolved, what moved, ward by ward.

The visit brief

Generated before any trip. Who you are meeting, what you promised each of them, what is pending in that ward.

Built so it cannot become something else

These are architectural facts rather than assurances, which is what makes them worth stating.

ELIGIBILITY DATA IS COLLECTED, AND IT RUNS IN ONE DIRECTION ONLY

Who qualifies for this scheme?

Answered

List, filter, rank or export people
by community or religion

Not possible by design

No party affiliation field exists anywhere, and none ever will

ASKED ONCE

Only on the entitlement path. Never asked to file a complaint.

HELD AS A RECORD

Against the eligibility record, mirroring the government certificate, not attached to the person as a label.

ONE DIRECTION

The system answers who qualifies. It cannot segment people.

WHY IT IS HELD AT ALL

Schemes in India turn on category. An engine that cannot read these cannot find anyone the benefit they are owed.

Four more that are structural, not promised

Every sensitive read is logged

Who opened it, when, and against which scheme. The office can produce that log on demand. If anyone ever alleges the data was used for something other than getting people their entitlements, the record answers for itself.

Whoever funds it sees nothing

In writing. The moment a constituent believes a supporter can read their complaint, the intake channel dies, and the intake channel is the whole system.

Data belongs to the office

Not to the person. With a defined handover on a change of member, mirroring the rule under which sanctioned works continue across a change of member.

Consent, retention and a conduct switch

Built to the Digital Personal Data Protection Act, 2023. A number given to file a complaint is not a number given for broadcast. Outbound freezes automatically during election periods.

Nine builds, five of them live government portals.
Names withheld here and shareable under a confidentiality undertaking. Figures as of 10 July 2026.

Most of this we have already built

108 CONSTITUENCIES	A constituency funds portal State government	Local area development funds. A dead Windows only application rebuilt on modern .NET, with 6,733 works and 648 budgets reconstructed, about 40 screens and more than 500 tests.	The works and funds rail, already shipped at larger scale
115,652 CLASSIFICATIONS	An enterprise services portal State government, flagship	59 tables reconstructed and a 54 by 57 semantic catalog, across 10 classifiers over twenty kinds of free text.	Scheme fit: 54,143 eligible but never applied gaps found. The entitlement engine.
2 PORTALS LIVE	Two citizen facing portals State government	Complaints sorted into 10 and 11 categories by urgency and sentiment, with officials, schemes and districts held in one entity graph.	Grievance intelligence, proven twice
435 TESTS	A field service product Private operator	Customer app, worker app and admin portal over one backend. 46 tables and 82 API routes, with no AI anywhere in it.	The multi role application rail, and proof we ship whole products
10M WORDS	A publishing pipeline National publisher	Structured into a research corpus with 6,343 source citations, Indic OCR and speech at scale, print ready colour managed output.	Indic speech and documents, and the card printing

One thing stated plainly rather than glossed: we run Indic pipelines in production but have not yet shipped a Malayalam first product. That argues for a Malayalam editorial reviewer on the team from week one, and we have priced that in.

How the first constituency comes alive

01 TWO TO THREE WEEKS

On the ground

Someone works the constituency with panchayat and municipality records, building the asset and institution register: every school, anganwadi, health centre, road, transformer and water scheme, and every organisation with its office bearers. No MLA office in India holds this. It is the expensive part and it is what makes everything else intelligent from day one.

02 BEFORE ANY COMMITMENT

A working demonstrator first

We build a running system for the constituency on synthetic data, using the same method by which we reconstructed 250,000 rows for a state portal that could share nothing. You send a voice note into it and watch what comes back.

03 WEEK ONE

Then the office runs on it

The measure of success is simple: the staff stop reaching for the register. Malayalam and English are built together from the first day rather than one being added later.

Three versions

V1

- ✓ Bilingual intake with visible status
- ✓ Ward map
- ✓ Civic issues and the fund router
- ✓ Invitations and appointments with the reply window
- ✓ Referrals with the diligence file
- ✓ The monthly report

V2

- ✓ Jurisdiction routing with drafted instruments
- ✓ The commitment ledger
- ✓ The Assembly link, where failed casework becomes a question with its numbers attached
- ✓ Targeted outbound

V3

- ✓ The visit brief, once there is enough history for it to be worth reading
- ✓ The public dashboard
- ✓ The annual record

What we need from you

Six questions. The answers shape the first build more than anything else on these pages.

1 Is the reply window credible?

A specific, warm answer within forty eight hours to every invitation. Does an office of this size clear that, or should the window be longer?

2 Referral letters, how far?

Three grades, defaulting to the weakest, with no letter issued without a diligence file. Too restrictive for how these offices really work, or about right?

3 Who sits at the desk?

How many staff, what are they comfortable using, and should the interface default to Malayalam or to English?

4 Which constituency first?

Rural, urban and mixed constituencies behave very differently. The first build shapes the product, so the choice matters more than it looks.

5 Anything we have got wrong?

The three rails came from the office's own description. If there is a fourth kind of work we have missed, now is when it is cheap to add.

6 Where should it open?

Lead with the constituent's phone or with the fund router? One is emotional and one is practical, and different members respond to different openings.

Two items we are handling on our side: the fund rules need checking against live government orders before we build the router, and referral letters touching foreign funders need a legal opinion before we build that path.

An office that knows its constituency, answers everyone, and forgets nothing.

*We would like to build the demonstrator on a real constituency and show it
in the room. Two to three weeks from a decision.*
